### THAR AND PARKAR

#### DESCRIPTION

TABLES II-A, II-B AND III

CHAPTER 1 OF 'A' VOLUME

The district lies between 24° 13° and 26° 21' North Latitude and 68° 40' and 71° 11' East Longitude and has an eastern.

Position, Area and General area of 13,638 square miles. It is bounded on the north by the territories of His Highness the

Mir of Khairpur, on the east by the states of Jesalmir and Marwar, on the south by the Rann of Cutch and on the west by the Nawabahah and Hyderahad Districts of Smd. It is divided into two main portions which are absolutely distinct from one another, the irrigated area of the west sometimes known as the Pat and the desert area to the east, the Thar, which constitutes a portion of the vast truct of country which embraces the Rajputana states and is often designated in maps as the Great Desert. The Eastern Nara is for a long distance the line of demarcation between the two regions, and further south at Umarkot for example the fusion of the two is clearly marked. It is possible to stand on the walls of the fort and in one direction to see annihills continuing as far as the horizon, and in the other to see the rich allavial plains of Sind with vast stretches of rice cultivation and lined everywhere with avenues of trees. The latter region with the splendid irrigation of the Jamese and Mitheae expalsystems yields abundant crops of rice, wheat and notton, and in places is as picturesque a piece of country as is to be found anywhere in the Pravince It is mostly the creation of man guiding the waters of the river Indus to his own uses. The forces of nature which originally produced the desert are also still at work there and very evident. For ages which go beyond human history the whole Delta of the Indus, the coast line where its mighty waters encounter the sea and the Raun of Cutch, have been a great depositary of the finest sand, which, as fast as the ever shifting waters let it dry, is caught up by the fierce winds that blow from the sea with but little intermission through the long but season and is swept away to the north-east. Forming long ridges in its course, as wind blown sand always does, it has produced a landscape which has been aptly described as resembling "The Atlantic in a severe storm." But the ridges do not, as is the case with sea waves, run with the line of their crests at right angles to the direction of the wind but parallel to it. Observation of the same phenomenon on a small scale anywhere will show the reason for this. The origin of a ridge usually is a bush or other obstruction, which arrests the sand to windward and shelters it to leaward. Once formed, the ridge itself becomes the obstruction and grows as it began, with a gentle slope on the side facing the wind and an abrupt fall on the other. The radges are naturally irregular and only roughly parallel, as that they often enclose sholtered valleys, above which they rise to a height of some one hundred and fifty feet. These valleys are frequently moist enough to admit of cultivation and when not cultivated they yield luxuriant crops of rank grass. By the inhabitants of the desert the fodder is considered particularly natritious and their opinion is supported by the large exports of ghi and fine cattle in good years. Even on the sandhills a very little min suffices to matain a surprising amount of vegetation, consisting of Salvadora (Khabar), stunted Ber, Babal trees and small shrubbery of kinds which exmels cat. But the extraordinary saltness of the subsoil and the consequent difficulty of finding water fit to drink renders many tracts quite uninhabitable. In many of the valleys the subsoil water collects and forms large salt lakes, very picture-que sometimes, which rarely, if ever, dry up. The old Salt Department used to register more than one bundred of these deposits of salt. Two were regularly worked and the rest guarded. Many of them have however now dried up since the measures taken to restrain the river floods that used to devastate the eastern talukas of the Sukkur District have reduced the flow of water underground.

The only hills in the district are at Nagar Parkar in the peninsula at the extreme south-most corner known as Parkar which is a small area of country quits different from the desert. The tract is flat and level except close to Nagar Parkar itself. These hills have no connection with the other ranges in the west of the province; they are granitic and appear to belong to the same geological series as the crystalline rocks of the Aravalli range (see Goology A Volume). The principal range, Karunjhar, is twelve miles in length and attains a height of a thousand feet. Smaller hills rise in the east. They are covered with sparse jungle and pasturage and give rise to two perennial springs as well as temporary streams after min.

There are no other streams or rivers in the district, unless the Eastern Nara be regarded as one. It was the bed once The Eastern Nara. of either an independent river, or of a branch of the Indus (see A Volume, page 3), and afterwards provided a channel whereby the annual floods from the upper reaches of the Indus found their way ultimately to the Rane or to the Kori creek. But it could not carry the whole body of water, and the overflow was often destructive, particularly in the Sanghar and Pithoro talukas. When measures were taken to restrain the floods, drought succeeded and these lands became a waste inhabited only by nomad graziers; but the opening of the channel which now connects the Nara with the Indus at Rehri converted the former into a permanent canal which, together with more recent irrigation works, has brought back verdure and fertility to the Nara Valley. The course of the Nam itself has been described as "a carpet of evergreen grass, with a dense tamarisk kandi and babul jungle, interspersed with large, deep lakes running miles into sandhills and having a perennial stream of water running through the valleys ". Of these lakes the greatest is the Makin Dhand, in which the Hur outlaws found secure shelter and defied every effort to capture them during the years 1893-96. The following account of it is taken from a report to Government by Sir Evan

James (at one time Commissioner in Sind). "The Dhand consists of a very large depression, roughly about twelve miles by ten in extent, into which the waters of the Kastern Nara discharge themselves on their way to the Mithrao, Thar and other canala. During the inundation it is almost all under water and forms a large swamp filled with *lai*, i.e., tamarisk trees, *babul* and coarse grass and reeds, though a few little dry oases are at all times to be found. After the subsidence of the mundation, though there is a great deal of swamp and dense jungle, large areas of good grazing ground are exposed which gives pasture to thousands of cattle."

Since the harnessing of the Nara, and the construction of the Jamrao canal system floods have entirely ceased in the district, and the land is now dependent for its fertility upon regular irrigation.

The climate differs considerably in the two portions of the district. In the Nara Valley and at Mirpur Khas it is temperate, as the climate of Simi goes, being neither execusively hot in the summer nor very cold in the winter. Frost is unknown, whilst 120" is the highest temperature on record, and that has only been attained in one year. The rainfall varies. In 1899, a year of famine, only 6 cents fell at Umarkot. In 1913 on the other hand 26 36 inches fell, and the maximum fall on record occurred, i.e., 41 42 inches at Mithi and Pithoro. The average rainfall at Mirpur Khan is approximately 10 inches. Most of the rain falls in the monsoon months between June and September, the winter rains are very slight, whilst April, May, October and November are practically rainless. The perennial irrigation of the Jameso and Mithrao areas renders the surrounding country unhealthy, and malaria is probably more severe in this district than in any other in Sind. On the other hand the desert appears, from such information us is available, to be comparatively healthy. The hot weather which is not severe at Mirpur Khas or in the Nara Valley is however something to be dreaded in the desert, if the following description by Mr. Horace Bell is just: " A strong wind from the south-west and west-south-west blows over the Sind desert and runs up over Rajputana in the months of March, April, May and June. At the end of April, or in May, when the wind is most violent, or in what the natives call the chaliba, or forty days, the wind has at times a probable velocity of 40 miles an hour and it is apparently hardly less violent at night. The whole atmosphere is charged with dust and fine sand, the creets of the ridges are all in motion and scarfs of drift sand form on their north-east ends. The people who live in this desert describe this time of the year as almost intolerable; and indeed, with the fearful heat day and night, the sand in their mouths, eyes, food and clothing, the want of water and the almost sleepless nights, it must be as near a realization of the infernal regions as they can expect to find in this world."

### POPULATION

# Tables I, IV, V AND VI

### CHAPTER IV OF A VOLUME

In 1921 the population of the district was 3,96,331 divided into count that.

2,12,735 Massalmans or 51 per cent, unit 1,75,686 Hindus or 46 per cent. Only 7,910

persons were registered under other religious.

At a rough census held in 1854 the population was returned as 41,535, and at another in 1856 showed it as 51,073. It would not be wise to place much reliance on the result of these attempts to enumerate the wantdering tribes of a vast desert district so recently brought under regular Government, but there can be no death that several generations of misrale and oppression, combined with the general inscentity of life and property, had desolated the country. The repidity with which it recovered is strikingly shown by the results of each succeeding cannot as given in the margin. The population in 1872 was four and a half

times what it was computed to be in 1856, 230,038 and in the succeeding 39 years it increased by 1851 358,181 mearly 90 per cent. The increase shown by 1801 368,814 the census of 1901 was only 2 per cent., but it 133,388 mearly 90 feried of famine the effects of which had been desastrons in a district so largely

pastoral. The increase in the encoceding decade had been more or less normal

Propertion of Sexus.

4

The number of females to every thousand males in the district is shown below :—

Total population.	Home born population.	Mussalmana	Himlus.
800	814	800	821

The deficiency in the number of females has not been satisfactorily explained in the case of any district in Sind and there is nothing in these agares to account for the phenomenon in this district.

The district is still very thinly populated. Over its enormous area of baimsules.

Out to only 29 per square miles the population works out to only 29 per square mile. Only 2 per cent. live in the towns of Mirpur Khas and Umarkot. The former has doubled its population in the decade from 1901 to 1911, and being one a considerable Railway junction will doubtless continue to increase. Umarkot, the former headquarters of the district shows a untable decrease of seven laundred and twenty-five persons over the 1911 figures. The town is at some distance from the railway and the general flow of trade. The thickest rural population is found in the Mirpur Khas and Digri Talukas, i.e., in the Jammo truct where there are 95 and 99 persons

respectively to the square mile. The desert is naturally spaniely occupied, and Chhachhro and Diplo show only 18 and 12 people to the square mile.

The proportion of the population whose birthplace was not in the district was 32 m 1891, 20 in 1901 and 17 per Migration. cont. in 1911 which indicates that the expulsion Rajpurano. 35,354 Hyderabad Sint 10,437 of this element was the principal way in which Punjah 6,230 the famine of 1899 operated to reduce the 5,297 Chutch population. The figures in the margin show the Palaupar Agency 0,537 Klanitypur Stat 3,356 bomes of these aliens: The bulk belong to 1,200 Rajputana which murches with the eastern Suchur 1,250 Lightana 1,3014 barder of the district, and has always been the (Hiter planer E4,022 feeder of Sind on the east, as Baluchistan has

That ... To see been on the west. Even of the resident population, particularly of the desert, a large number would probably always give Rajputama as their native country. The figures of Hydrachad immigrants are not very significant, since the border between the two districts is a purely arbitrary one, and a constant exchange of residents between them is going on. The Punjable are colonial from the Punjab who have established themselves on the Jammo canal and are now one of the permanent elements in the population. The other figures are unimportant. Altogether there were 76,950 aliens in the district as against 15,174 natives of it found abroad.

The population, classified by religious, shows a much larger proportion of Hindus than any other district in Sind, but it must be remembered that the Bhils and Kolis, who are very numerous in this region, would class themselves as Hindus. There were 524 Jains, 83 Christians and 1,481 "others" at the census of 1921.

large number of Hindus in this district differentiates it from any other district in Sind. Prominent tribes, sic. As table VI shows, there are roughly four Hindus to every five Mussalmans and the dominant race of Hindus has for many centuries been the Sodlas tribe of Rajputs. They slaim to be of pure Rajput origin, and have remained Hindu, whilst those who penetrated further into Simi were rapidly converted to Muhammadanism after the Arab invasion at the beginning of the eight century. Scarely more than a fifth of the Hindus are Bamas, who are outnumbered, two to one, by the lower custes, i.e., Dheds, Bhile and Kolis. The Banies moreover, are not only Lohanas but Kirars (see A Volume, page 185). The xammadars are for the most part Sodhas, who call themselves Thakura. Some of them to this day receive pensions from Government in him of a share of the Custom duties which had been their right under pre-British rule. Among them are three jagirdam of the first class. Two of these, Thakur Rataming Chanduji and Thakur Premaing Gumanaing of Nagar Parkar, are descended from an uncle of the reigning Rana whom he murdered and succeeded. He had atterwards to flee for some raiding

escapade and became an exile. When the insurrection described at page 139 of Volume A broke out, his son and grandson found their opportunity and rendered such valuable services to the British forces that they were granted the jagir of Bodhesar and a pension. At the same time the jagir of the village of Kawra, rent free for life, was granted to the Rana of Umarkot which has been continued to his successors "upon political or other considerations". The present representative is Rana-Pinlansing scaled Bhabhutsing. There are other smaller jagirs and political inams held by Sodhaa in Umarkot, Nagar Parkar and Chhachhro Talukas.

Of the 212,735 Mussalmans at the census, 52,598 were Baluchis, and of these 14,308 were Rinds and shown separately in the census returns. The Baluchis are not in any way predominant in this district. His Highness Mir Fatch Khan Talpur, son of His Highness Mir Sher Muhammad Khan, lives at Mirpur Khas in the enjoyment of a life pension of Rs. 2,000 per measure, and other political pensioners of the same family also live there. Other Talpurs hold hereditary pagirs in the Mirpur Khas and Digri Talakas. For his assistance to Government in the suppression of the Hurs a political inam of the third class was granted in Sanghar Talaka to the late Bugti chief, Kawab Sir Shahbaz Khan, K.C.I.E.

#### AGRICULTURE

# TABLES VII, VIII AND XIII CHAPTER V OF A VOIGME

The alteration in the figures of area in table 7 is due to territorial changes. The "others" shown under "Not available for cultivation" consists of (1) uncultivable lands, comprising hilly tracts, sandy hills and saline tracts, (2) land set apart for special purposes, viz., for Government and Municipal buildings, etc., and (3) land set apart for public purposes, viz., for burial grounds, roads, railways, nussafirkhanss, etc.

Of the total area of the district, namely 13,636 square miles, 10,542 square miles are desert comprising the whole of the Diplo, Chhaebhro and Mithi Talukas, nearly the whole of the Nagar Parkar and Khipro and part of the Sanghar and Umarkot Talukas. The small portion of Nagar Parkar which is not desert consists of hills and the flat country surrounding them, on which cultivation is carried on by confining rain water with bunds. The western part of the district, as already stated, consists of good alluvial land and the area which is under canal irrigation has more than doubled itself in the last twenty-five years. The following is a brief description of each taluka.

Taluka Umarket.—Of the total area of 1,459 square miles, 1,018 are desert and 448 irrigated land. The irrigated portion is watered by the Thar wah ex Eastern Nara, and rice is the main crop. Ninety per cent. of the cultivation is under flow.

Taluka Pithoro.—Wholly alluvial. The western and southern parts are watered by the Mithmo and the eastern by the Hiral. Rice is the main crop, and 76 per cent. of the cultivation is under flow.

Taluka Sanghar.—The present area is 818 square miles, of which 517 square miles are alluvial and the remainder desert. The Makhi Dhaud is in this taluka. The buik of the irrigation is from the Mithrao. Eighty-five per cent. of the cultivation is under flow.

Talaka Khipra.—This Talaka is divided into two portions, one consisting of sandhills and valleys covering an area of 1,735 square miles, and the other of an alluvial tract, having an area of 514 square miles. Rice is extensively grown and 77 per cent. of the cultivation is under flow, the rest being under lift.

These four talukas are in the Nara Vulley and form the sub-division known by that name. They form a homogeneous tract and the soils of the alluvial portions in each are the same. The chief varieties are:—

Kalazati, surtable for rice.

Mithi, suitable for every kind of crop.

Warinsi, suitable for dry crops, vegetables and melon beds.

Dusar, suitable for wheat crops.

Gisir, smtable for vegetables.

Taluka Micpurkhas —An alluvial arm irrigated mainly by the Jamrao Canal Rice is forbidden on the Jamrao tract. Cotton and wheat are very extensively grown. Sixty-eight per cent of the cultivation is by flow.

Taluka Jamesshod.—This taluka is irrigated entirely by the Jameso: cotton dry crops and wheat are the main crops. 83 per cent. of the cultivation is by flow.

Taluks Digri.—The Jamuso irrigates practically the whole of this taluka, and its agricultural conditions are the same as those of the adjoining taluka of Jamesahad.

These three talukus form the Mirpurkhan sub-division, and up to 1912 were administered by a colonization officer in charge of the Jameso tract. The soils are the same throughout. The chief varieties are :-

Chilri, suitable for cotton.

Child Dasar, sustable for dry crops.

Danar, auttable for wheat.

Taluka Nagar Parkar.—All Thar, or snothill desert, excepting Parkar in the south-east. Nearly all the cultivation is dependent on rain, and but a little is done on wells in the rabi senson.

Falaka Chhachhro.—This is a desert consuming of sandhills. In the sandy soil of the valleys bajri, sesame, field vetch and mang are cultivated.

Taluka Milki.—All desert. On the "Kathi " soil in the valleys about 400 acres of wheat are cultivated in the Rahi season. Another kind of soil, bordering the Raun, is known as Dogo. Bajri is extensively sown in it in the summer mouths.

Tolula Diplo.—All desert. The conditions are the same as in Mithi Taluka.

These four talukas comprise the desert Division, and their fertility depends entirely upon rain, and also upon wells in the Nagar Parkar Taluka. The soil in Parkar is chiefly of the Dasar variety and yields good rabi crops.

The principal crops of the District are :-

#### KHARIF.

Bajri.—In the staple food crop of the district and is grown in every taluka, but to the largest extent in the four desert talukas. It is better suited than any other crop for barani Kharif cultivation.

Juani.—Is not extensively grown. Two varieties, white and red, are grown.

Rice.—Is pratically confined to the talukas of the Nara Valley Division. Its cultivation is forbidden on the Jamrao canal, and there is not sufficient water for its cultivation in the desert. The chief variety grown is the white, known as Sarria.

Sesame.-Is chiefly cultivated in the Nara Valley.

totton.—Is very extensively grown on the Jamino canal, and some five varieties are produced. Experiments have been made at different times with Egyptian, American and other varieties, but at present only the Sindhi varieties do well.

#### RABL.

Wheat.—Is the main crop and is grown in the Mirpor Khas and the Nara Valley Sub-Divisions on canal water either by flow or by lift, when this is available, or by sailab or bom in the tracts where a cold weather supply of water is not available.

Rape and Jambha.—The area cropped with rape is not large in any Talaka, but jambha is grown to a considerable extent in Pithoro, Khipro, Jamesabad and Umarkot. The desert hardly produces any of either crop.

Green Gram.-Green gram is chiefly grown in Khipro, Umarkot and Sanghar.

## VESTYABLE AND FRUIT TREES.

The indigenous vegetables in common use are enumerated in the article on botany (A Volume). They are cultivated in all talukas of the Nara Valley and to a small extent in the other talukas. European vegetables and fruits, and particularly grapes and peaches, do extremely well at Mirpur Khas, and the Agricultural Farm there has done much to stimulate their growth. Umarkot is surrounded by old-fashioned Sindhi gardens in which local varieties of mangoes thrive.

### IRRIGATION

# TABLES IX AND X CHAPTER VI OF A VOLUME

The irrigational system cannot be treated by revenue Districts, as these do not always correspond with the Districts into which Sind is divided by the Irrigation Department. Figures relating to all canals of which any portion enters the district will be found in Table X, and for a full account of these the A Volume may be consulted. The district is comprised in the three irrigational districts of the Eastern Nara and the Northern and the Southern Januaro. Since the A Volume was written, numerous minor improvements have been carried out in the Jamme and the Mithmo canals. The Heran canal has been abandoned and the land commanded by it transferred to the Dim Wah in the Jammo Canal system. The Mithmo canal protective band which ran 87 miles from north to south, crossing the Railway at Pithoro, has recently been abandoned with the exception of a length of six nules from mile 28.

# THAR AND PARKAR

#### ECONOMIC

## TABLES XI AND XII

CHAPTER VII OF - A " VOLUME

There is not much to add to what has been said about this subject for all Sind; but the figures supplied for Table XII which represent a period before the economic pressure of the war began to assert itself, show that the daily wage of a labourer is lower and the price of food-grains generally higher than in any other district of Sind. The reason for the latter fact is that a large area of the district produces no grain, except a little Bajri and has little means of transport but the camel. But it must be remembered that the people of the desert depend more on the produce of their bends than on grain. Their economic condition is dependent on the supply of forage for their animals and a drought like that of 1900 depresses them for several years. In the western portion of the district the extension of irrigation has created a demand for agricultural labourers which the district itself is normally anable to meest, so that wages are kept at a reasonable layed only by immigration.

## TRADE, INDUSTRIES, AND COMMUNICATIONS

CHAPTER VIOLOF +A . VOLUME

The products of the desert tableas of this district, available for exchange with other places, are cattle, ghi, hides and thatha, i.e., the blankets which the people weave from the wool of their sheep. The wool is itself also sold and there are other minor products, of which one is guyer or geogni, the gum of Balsamodendron makul (see 'A' Volume, page 34). The cattle are mostly sent to Gujarat and a great deal of the ghi goes to Cutch. especially from the southern talukas, Mithi, Diplo and Nagar Parker. It is sent across the Rannon camels. Cutch appears to be the best market also for gague, khatha and not (covers for camel saddles), for skill in the making of which the Marwari leather-workers of the district have a name : Hides and skins, on the other hand, and wool and ghi are nent to Bycierabad and Karachi, taking rail at the most accessible station, to which they are conveyed on camela. The value of this trade is not even approximately known. The imports comist principally of cloth, oil and ingar, but include metals, dyes, tobacco, some grain and minor articles. The trade is chiefly in the hands of the banks of towns like Mithi. In the western and fertile talukas of the district, where rice, cotton, wheat, and oil seeds are cultivated, the conditions of trade are quite different. The great market for these products is Kamehi and the railway is near. Much of the thriving business done at Tando Adam and Shahdadpur is brought in from this district. But no information is obtainable as to the value of what it sends out, or receives in return,

There are now II ginning and pressing and 6 rice husking and 5 flour mills at Mirpur Khas, Jamesabad and Shadipali, three of them belonging to the well-known firm of Messrs. Ralli Brothers, who have a large agency at Mirpur Khas.

Up to 1909 the only railway passing through the district was the through
metre gauge line from Hyderabad to Marwar
Junction. In that year a railway constructed
by the Simi Light Railways Company was opened from Mirpur Khas
to Jhudo tapping the entire southern area of the Jamrao Canal, along
the bank of which it cans for a considerable distance. The complement
of this line was opened in 1912 when a similar line to the north was
roustructed from Mirpur Khas to Khadro. Mirpur Khas has thus
become an important sailway junction, and the natural centre of the
district, a fact that has been realized by the substitution of it for
Limarkot as the District Head Quarters.

Roads.—The following are the principal roads in the district with their stages:--

- House	Dis-	Character of Ro	al.	Stannar ka
Nagas Parine to				
L'unrebit via Mithi.	Miles			
From Nagar Pat-	34	Elst road but he	int	Musairkhana and abundant sweet water from wells.

Umarint to Hyderatud via Mirparkhan	Miles.			
From Umarket to Sull jo goth. Pithers Shadipali Station Mirpurkhas	13 8 13 15	Do. Do.	10	Mussirkhana and sweet water from well in the bed of the river. Mussirkhana and rweet water from wells. Mussirkhana, Local Fend Bunga- low and water from Mithree Canal. Mussirkhana, District Bungalow and sweet water from wells.

From Mirpurkhas the road proceeds due west to Tando-Allahyas in Hydershad District.

There are many other shorter roads connecting villages with one another and with the railway. For example there are roads from Umarkot to Chhor and to Dhoro Naro Stations, a road from Umarkot via Nabisar and Naokot to Rahimki Basar, roads from Mithi to Diplo and Rahimki basar, from Mithi to Chhachhro and from Mithi to Naokot. Roads lead from Mirpurichas to Khipro via Sindhri and from Saughar to Sinjhoro and to the railway at Jhol. None of the roads is metalled, and all have hitherto proved themselves adequate for the truffic that plies upon them.

There are two ferries on the Mithrao canal and some temporary ones on the Nara. The canals are all bridged at suitable places.

#### REVENUE

# TAMES XIV, XV, XXII-A AND B, XXIII, XXIV, XXV, XXVI-A AND B

### CHAPTER IX OF 'A' VOLUME

Table XV gives very complete figures of the rates of assessment payable under the current settlement in each Taluka. The desert cannot be brought under the irrigational settlement and is still "maettled". The little cultivation which is possible in the valleys between the sandhills after rain is assessed on a system known as Tuli which is described at page 107 of the A Volume. A survey with chain and cross staff was made some years ago in Chhachhro Taluka and a rough survey is now being made in the other three talukas. The figures of revenue given in table XXII A are expanded under different heads in the six succeeding tables. The head "Other Items" includes Opium, Salt and other sources of provincial revenue described in the A Volume and also that which is derived from the fisheries in the district. These are let out by the Revenue and the Public Works Departments according as the dhamle receive canal water or not. The fisheries controlled by the Revenue Department are practically confined to the Nara Valley. An account of the fresh water fish and fisheries of Sind has been given in Chapter II of the A Volume. Forest revenue is excluded from Table XXII-A and shown separately in Table XIV.

In this district there are two places at which duty is levied on sail namely, the Dilyar and Saran Deposits in the Khipro and Diplo Talukas.

The Dilyar Salt Deposit was opened in 1880-81. The Gagan dhand was first selected, and as the issue of the experiment was doubtful, temperacy buts only were put up for the establishment. The sales during the first year did not amount to 2,000 manuals, but they rapidly increased and in 1899-1000 amounted to 24,215. It was found however that the site was unsuitable owing to maluris and to mosquitoes. In the following year, therefore, it was decided to move the depot and it was shifted to the village of Dilyar in Khipro Taluka. The Gagan deposit was also abandoned for the adjacent one of Darwari, which is more productive but has the same disadvantage of being some miles distant from the depot. The salt is excavated from the bed of the dhand usually in February or March, when the water is low, and hesped on the banks to dry for a few days, after which it is conveyed on camels to the depot and stored in the open on a raised platform. From here it is weighed out to applicants on production of receipts showing that duty and charges have been paid. These amount to Rs. 1-7-10 per maund. The salt is purer than even that made at the Maurypur works mur Karachi,

The following figures show the sales during the fifteen years ending

			Endline mound
1900-01		4.0	17,485
1901-02	22	71	19,179
1902-03	***	1.1	27,067
1903-04			20,475
1904-05	**	10.0	25,735
1905-06	F-1	1.0	27,316
1906-07	**		19,774
1907-08	* 4	14.4	28,979
1008-09	44	14	29,311
1909-10			23,548
1910-11	- 1	41	23,264
1911-12		¥.4	31,191
1912-13:		N 4	30,274
1913-14	**	2.5	26,276
1914 15	- 12		\$7,920
1915-16	- 4	44.	44,319

The Saran Salt Deposit.—The large dhand at Saran about six nodes from Diplo which was selected for the supply of salt for the district immediately after the organization of the Sind Sain Department in 1878 has been worked continuously ever since. It is incharge of a superintendent and staff of guards, sto. The process of excavation is the same as at Dilyar, except that the deposit being contiguous to the depot the cost of camel carriage from the one to the other is avoided. The rate par maund works out at Rs. 1-5-9. The quantities sold during the fifteen years ending 1915-1916 were as follows:—

			Indian maunds.
1000-01	4.4	4.1	14,500
1001-03	- 6.6	9.9	16,853
1902-03	44	144	16,923
1903-04	14.0	45	16,194
1904-05	19.0	19.4	19,734
1905-00	2.5	191	21,683
1905-07	164	100	20,242
1907-09	954	No	27,286
1908-09	- 17	349	20,230
1909-10	744	- 44	24,932
1910-11			24,037
1911-12	177	- 14	30,070
1919-13	44	40	30,127
1913-14	Test	47	23,053
1914-15	0.4	10.0	5,277
1915-16	4.6	4.1	30,543

### JUSTICE

# TABLES XVI XVII, XVIII, XIX, XX AND XXI

# CHAPTER X OF A A VOLUME

The courts existing in the district for the administration of Criminal and Gren justice with their jurisdictions are shown Courts.

The Court of Sessions and District Court is that of the Sessions and the District Judge, Hyderabad.

Name of Court.	Jametetim
Court of the Sub-Divisional Magnetrate, Merpus Khas Court of the Sub-Divisional Magnetrate, Nara Valley Court of the Sub-Divisional Magnetrate, Nara Valley Court of the Sub-Divisional Magnetrate, Desert Eleven Courts of Maintyarkars and Magnetrates, one in each talisha. Eleven Courts of Head Munshin and Magnetrate, one in much talisha.	

The District Magistrate is by law a first class Magistrate. The Sub-Divisional Magistrates are ordinarily of the first class. The Mukhtyarkare are Magistrates either of the first or the second class, and the Head Munshis are usually of the third class. Special Magistrates are from time to time appointed and their powers vary. The arrangements for the criminal justice of the district are of a normal character.

Up to 1916 the arrangements for civil justice were of an abnormal character. They have been described at pages 449 and 450 of the 'A' Volume. The Subordinate Court of Mirpur Khas now has jurisdiction over the whole district and the Tando Allahyar Taluka of Hyderabad District and the Sinjhoro Taluka of Nawabshah District, and sits at Mirpur Khas visiting Tando Allahyar and Umarkot on circuit. The District is subordinate to the District Judge of Hyderabad. The system has thus been brought into line with that of the other districts of the Province.

There are four full time Sub-Registrars in the district, one for Mirpur Khas and Sanghar Talukas, one for Jamesabad, Digri and Pithoro, one for Khipro and one for Umarkot. The work in the four desert Talukas is done by the Head Munshla who are ex-officio Sub-Registrars.

There are cleven Sub-Jails, one at each Taluka head-quarter town, and fifteen Pohce look-ups, ten at Police Jails.

Stations and five at outposts. The Hyderabad Central Jail is the prison for the district.

#### LOCAL AND MUNICIPAL

# TABLES XXVII-A AND B AND XXVIII

CHAPTER XI OF 'A' VOLUME

The District Local Board is composed of 24 members, half of whom are nominated and half elected, one of the latter being elected by the holders of entire alignated villages. The Collector is nominated as President of the Board and hitherto the Vice-President has been an official.

The composition of the Taluka Boards is exhibited below :-

Th	laks Box	Nominated.	Elected sum bers	Total		
Mirpur Khin Janisashad Digri Umarkot Sanghar Khipro Pithory Nagar Parkar Ukhindhiro Mithi		AMILIAN INC.	100 100 100 100 100 100 100 100 100 100	7 7 6 6	7 6 0 7 8 9	14 13 13 12 12 6

The Deputy Collector in charge of the Taluka is always nominated President and the Mukhtyarkar has hitherto been elected Vice-President. The elective tranchise was introduced in the year 1915-16 into the District Local Board and the Taluka Boards of the Mirpur Khas and the Nara Vulley Divisions. The District Local Board and all the Taluka Local Boards have formed executive and works committees for the prompt disposal of business. The tables give details of the revenue and expenditure of the boards.

In 1921-22 the Boards maintained 131 schools, 110 dharmschalas, 9 dispensaries, 2 veterinary dispensaries, 184 wells, 230 tanks, 229 roads, 340 bridges and 5 gardens.

The District Local Board makes certain annual contributions to institutions outside the district, the chief ones being Rs. 1,000 to the Dayaram Jethmal Sind College and Rs. 600 to the Sind Madressah.

There are only two Municipalities in the district, at Umarkot and Mirpur Khas, with a population of 4,097 and 5,789 respectively. When Bombay Act VI of 1873 was introduced into Sind on 1st October 1878, there were Municipal commissions in ten other towns, which lost their positions under the limit imposed by that Act, having populations of less than 2,000 inhabitants. Another of the old Municipalities, Nagar Parkar, was abolished in 1886 for the same reason, while a new one was created at Mirpur Khas on April 1st, 1902. The Municipality at Mithi was abolished on January 1st, 1905.

In the two Municipalities of Mirpur Khas and Limarkot there are 15 and 12 councillors respectively of which 10 elected and 5 nominated by the Commissioner in Sind for Mirpair Khas and for Umarkot, all nominated by the Commissioner in Sind, 4 being officials. The Deputy Collector, Nara Valley, President of the Unurkot Municipality, Mirpur Khas Municipality has its own non-official President

Up to 1915-16 the Vice-Presidents have also been officials. The revenue and expenditure of each board is shown in the tables. The income of Mirpur Kkas shows a steady increase. Up to 1915-16 octros has constituted almost the only source of revenue in both Municipalities. and in Umarkot fully a third of the amount recovered under this head was lost again in refunds on goods re-exported. Now the refund system has been abelished and terminal taxation introduced. Small amounts are also raised by a tax on wheels and animals, school fees, markets, cattle pounds, etc. The heaviest items of expenditure are conservance and the maintenance of the schools and dispensaries. Government recoups one-third of the amount spent on schools and a partion of the expanditure on dispensaries, and the Local Board also makes a contribution towards these purposes. Neither Municipality has any debt.

From 1915-16 a terminal tax has been substituted for octroi at Umarkot and partly from this cause the municipal finances have suffered. The trade in ghi from the desert has largely fallen off, as the traders find that they can get a market for their wares at the railway stations and thus avoid the payment of any municipal dues. Timerkot, which was formerly the main northern market of the Thar, is steadily losing its position, and is being supplanted by the townships which are growing up at the railway stations of Shadipalli, Dhoro Naro, and Chlor. The financial position of its Municipality is thus not likely to improve. On the other hand as already remarked, the convergence of four lines of railway on Mirpur Khas is likely to enhance the importance of that town as a piace of residence and as a place of business.

#### EDUCATION

# TABLES XXIX A, B, C AND D CHAPTER XII OF 'A' VOLUME

Table XXIX-B shows the number of Educational institutions existing in the district during the 26 years ending 1921-22 and the number of boys and girls receiving instruction in them. Those recognised by the Educational Department and assisted by Government are classed as public; others as private. The Primary Schools described as public indigenous are those which though they do not teach according to prescribed standards and therefore do not receive grants in-aid, submit to inspection and get a small annual subady on certain conditions.

The cost of education is met from provincial revenues, local and municipal funds, fees, subscriptions and endowments. Under the present rules a grant-m-sid is made by Government from provincial revenues as far as possible to all schools which conform to the prescribed conditions. The grant in each case is assessed by the Educational Inspector, or by one of his assistants, and is limited to one-half of the local assets or one-third of the total expenditure of the institution during the previous official year. The details of the expenditure will be found in Table XXIX-D.

The duty of providing primary education devolves in rural and nonmunicipal areas on the Local Board and constitutes in Municipal areas one of the statutory obligations of the Municipalities. The development of these institutions during the last twenty years is traced in Table XXIX-B.

There are 83 boys' and 8 girls' schools, all classed as superior schools.

Local Board Schools.

Education is free in all the schools. The number of girls' schools is remarkable in a district which is otherwise so backward from an educational point of view. These achools do particularly well in the desert.

The tuition given in the Municipal Primary Schools is identical with Municipal Schools teaching up to the seventh vernacular standard. There are two such schools for boys and one for girls.

There are two Anglo-Vernacular Schools, the Pithore Madressah and Anglo-Vernacular Schools in 1996 near Pithore Station. It was built at a cost of Rs. 31,216 out of raminlari contributions and a grant from Government. It was intended for the sons of Muhammadan Zamindara only, and this rule has always been steadily enforced. The school teaches up to the fourth standard English and also has a vernacular branch.

The school building which is double-storied and spacious has accommodation for 81 boarders. Thirty-two free boarders and 11 boys paying half fees are maintained.

The idea of placing the Madresaah at Pithoro was to keep it away from the influence of a large town, but it has been found that this advantage has not compensated for the remoteness of the place and the difficulty of keeping an effective control over the working of the school. It has therefore been decided to remove the institution to Mirpur Khaa, the headquarters of the district, and the change will be carried out as soon as hands are available.

The Mithi School teaches up to the fifth standard and a hostel has been erceted in connection with it.

There are two Anglo-Vernacular Schools in Mirpur Khas which receive no nid from Government, a railway school for the sone of milway employees only and a Church Mission School.

The indigenous schools comist principally of the Koran classes which have descended to the present time from the magnetic days of Talpur role. The classes which are commonly held in mesques and in sheds adjusting the musques are attended by Muhammadan boys and girls whom the Mullan instructs in the reading of the Koran. There were 77 auch schools in 1921-22 with, 1,932 purple. A Special Deputy Educational Inspector has now been appointed to approvise these schools and to assess the Government grants which are admissible to them.

A Library known as the Hudson Library was opened at Mirpur Khasin 1915. It was built by private subscription at a cost of Rs. 4,000. The building has since been transferred to the Municipality and is now maintained by it. It contains about 700 books, English and Sindhi.

There is one printing press in the district, the Mispur Khas Gazette

Press at Mispur Khas. A weekly vermicular

Resipator paper, the Mispur Khas Gazette is published

from it. It has a circulation of about 600 copies.

#### HEALTH

# TABLES XXX-A AND B. XXXI, XXXII AND XXXIII

CHAPTER XIII OF A VOLUME

There are no hospitals as yet in this district but only dispensaries at eleven places. These are maintained by Local Fund and Municipal contributions, with assistance in all cases from Government. The dispensaries at Umarkot, Chhachbro and Saughar have also a little money invested. The tables show the work done at each.

A new Dispensary, or "Dispensary convertible into Hospital" was opened at Mirpur Khas in 1913. It is a large and spacious building standing in a big compound, and contains four wards with six beds in each, and an operating theatre. It is in charge of an Assistant Surgeon, who is also medical officer for the whole district. It is intended that ultimately this building will become the Civil Hospital of the district with a Civil Surgeon in Charge.

There is a Veterinary dispensary opened by District Local Board at Mirpur Khas and proposals to open three others are under consideration.

# ADMINISTRATION

# CHAPTER XIV OF A A VOLUME

The District contains sleven tainkns as shown below :-

The form of administration that formerly prevailed in the district has been described in Chapter 14 of the A Volume. This continued up to November 1st, 1912. On that date the office of colonization officer of the Jamrao Canal was abolished and a new district known as Nawabahah was created out of the Thar and Parker and Hyderabad Districts. Thar and Parkar surrendered the Sinjhoro taluka to Nawabshah and received Digri taluka from Hyderabad in exchange. The designation of the head of the district was changed from Deputy Commissioner to that of Callector and the staff of the district was increased by the appointment of an Assistant Collector to take charge of the new sub-division of Mirpur Khas, comprising the Mirpur Khas, Jamesabad and Digri Talukas, i.e., the greater part of the Jamrao area. The Nara Valley charge was at the same time reduced to the four talukas of Umarkot, Pithere, Khipro and Sanghar. The desert charge remained the same. In addition an officer designated as Chitnis with the rank of a Mukhtvarkar was attached to the Collector's Office. A separate Huzur Treasury in charge of a Deputy Collector had already been opened for the district in 1907. The work had previously been in charge of the Husur Deputy Collector at Hyderabad. The headquarters of all these officers have been fixed at Mirpur Khas, where the Civil Station has now been practically completed.

The Collector has been entirely relieved of the functions which he used to perform as District Judge, District Superintendent of Police, Forest Officer, and Officer in charge of the Public Works in the desert, and he retains only the same authority as that of any other Collector in the Province: He is President of the District Local Board and of the Mirpur Khas Municipality, whilst the Sub-Divisional Officers are Presidents of the Taluka Local Boards in their charges.

# PLACES OF INTEREST

# CHAPTER XV OF A VOLUME

At this place four miles north, north west from Nagar Parkar there are the remains of three ancient Jain Structures Bhodrar. supposed to have been built in A. D. 1375 and 1449. They have been classed as Ha under the Ancient Monuments Preservation Act. Two of them were previously used as stalls for eartic, and the third the interior of which was very beautiful and interesting, had large holes in the back wall and was in a very neglected state. Closs by is a tank 400 feet by 200, said to have been built 600 years ago by Bheda Permar, son of Prince Jeso Parmar, who finding that it would not retain water remedied the defect, under the advice of the Brahmans, by sacrificing his son to the goddess of the town.

At this place there is also a mosque built of marble with marble pillars and said to be of the same age as the temple. It has also been declared a protected monument under the Ancient Monuments Preservation Act.

Chhachtro, 25° 6' North Lazitude and 70° 18' East Longitude, the lical-quarters of the taluka of the same name is a small town with a population of 3,024 souls at the census of 1911. It contains a Makhtiarkar's office, Post-effice, Police station, Vernacular school, Masafirkhana and Dispensary. Chiachtro has road communication with Umarkot and other places in the desert. Embroidery work of the kind practised in the Desert (see A Volume, page 397) is done at Chhachtro. The nearest railway station is thair road on the Jodhpur-Rikaner line 53 miles distant.

Digri, 25° 9' North Latitude and 59° 9' East Longitude, the head-quarters station of the Digri Taluka, is a small village with a population of only 1,097 souls. It contains the office of the Makhtiarkas, Post office, Musafithana and a Public Works Department Inspection Bungalow. Digri is one of the markets for the disposal of the produce of lands cultivated on the Jamrao in the surrounding talukas and it has a station on the Mirpur Khas-Jhudo Railway.

Diplo (24° 28' North Latitude and 69° 37' East Longitude), the headiquarters of the taluka of that name, had a
population of 1,939 at the census of 1911. It
contains a Mukhtiarkar's office. Pour office, Police station, Musafirkhana
and school. The nearest railway station is Jhudo on the Mirpur KhasJhudo Railway 44 miles distant. No industry of any importance is
carried on in the village.

Gore 14 nules north west from Vinewah, contains a very fine old Jain temple measuring 120 feet by 50 and built of marble. There used to be an image in this temple which disappeared some years ago and about which there was the following tradition. About 500 years ago one Manga Oswal of Pari Nagar went to Patan to purchase merchandise. There a spirit appeared to him and told him of an image buried under the house of a certain

Mussalman, which he managed to scenre and brought to Pari Nagar. Again the spirit appeared and told him to put the image in a carr built of mm wood drawn by two calves and go without looking behind him. He went until the cart broke down and he fell asleep from sheer weariness. Then the spirit appeared for the third time and told him that the image was now under the ground, and he should build a worthy temple on the spot. This he did. The account compiled by Captain S. N. Raikes from traditions, manuscripts and personal narratives, shows that this idol of Parasnath was brought at Piran Patan for Rs. 100 by a bania who no doubt invented the legend given above to enhance its value and established it at Gori. This was in 1378 A. D. It had a diamond of inestimable value between the eyebrows and two on the breasts. After some centuries it was removed to Virawah, the chief of which place kept it buried and exhibited it at intervals in different places collecting much money from the crowds who came to we it. It was last exhibited in 1824 at Virawah. In 1832 the chief died suddenly without revealing where he had buried it, and it is lost. The temple though much defaced is very fine. It has now been declared a protected manument under the Ancient Monuments Preservation Act. It is visited annually by the Jains of the district.

Jamesahad in 25° 17' North Latitude and 69° 26' East Longitude is the head quarters of the Taluka of Jamesahad so named after Mr. (afterwards Sir Evan) James, a former Commissioner in Sind. Although designed on an extensive scale it is still a very small rown and only contained a population of 572 at the census of 1911. The chief buildings are the Mukhtiarkar's office, Police lines, Post office and Musafirkhana. It has a station on the Mirpur Khas-Jhudo Railway

Khipro in 25° 50' North Latitude and 60° 25' East Longitude is a small town and the headquarters of the taluka of that name and contained a population of 1,992 at the census 1911. It is situated on the Eastern Nara and contains the office of the Mukhitiarkar, Police lines, a Post office, Vernacular school, a District Bungalow, Dispensary and Garden. The nearest railway station is Pithoro on the Jodhpur-Bikaner Railway line 18 miles distant, Woollen carpets, rugs and coarse cotton cloth are made at Khipro.

Mirpur Khas situated in 25° 31' North Latitude and 65° 3' East Longitude is the headquarter town of the district, having succeeded Umarkot in this position in 1906. It possesses a Municipality and had a population of 4.850 at the census of 1911. It is a junction on the Jodhpur-Bikanir Rajlway, lines going west to Hyderabad, east to Marwar, north to Khadro and south to Jhudo. By road it is connected with Hyderabad, Hala and Umarkot. From Hyderabad it is distant the miles via Tundo Allahyar. Mirpur is of modern date having been built in 1806 by Mir Ali Marad Talpur, and as the headquarters of the Manikard branch of the family at once assumed a position of some importance.

Burnes estimated the number of mhabitants at 10,000 Here lived Mir Sher Muhammad Khan Talpur whose army was defeated in 1843 at the buttle of Dabo. After the compact the Mir continued to reside here. His fert, or "kot" has now disappeared except for the fragments of one wall, and on the site the Taluka kacheri has been built. To commamorate the spot a marble tablet has been erected on the kacheri wall with the following inscription upon it:

#### The Fort.

within which this building stands was the residence of Mir Sher Mukammad Khan Talpur "The Liem of Sind".

Born 1810.

Died 24th August 1876.

His son His Highness Mir Fatch Khan still resides in the outskirts of the town

The importance of Mirpur Khas dwindled very considerably after 1843, Umarkot being the chief town in Sind to the east of Hyderabad. With the advent of the railway and the opening of the Jamrao Canal in 1900 the town at once began to usurp the position of Hmarkot and before long steps were taken to remove the district headquarters from Umarkot to it. Accordingly a civil station was laid out, and bungalows have now been constructed for the Collector, two Assistant and Deputy Collectors, the District Superintendent of Police, the Executive Engineer, an Assistant Engineer and the Deputy Director of Agriculture. All stand in large compounds and, thanks to the excellent soil and to perennial irrigation, have splendid gardens, in which fruit trees do very well. The Government offices consist of the Collector's Kacheri, the Police lines, the Sub-Judge's court, the Hospital, the Taluka kacheri, the Resident Magistrate's court and a Veterinary Disponsary, all built of rad brick and of very spacious dimensions. To the south of the railway stands the Government Agricultural Farm, occupying 60 acres of land, where experiments on new crops, etc., are made. On the outskirts of the town to the north is the seed farm attached to the main farm, whence seed is supplied on sale for cultivation.

The old town is nothing but a collection of hovels, but a new town has spring up close to the milway station. It contains wide streets with pakks buildings and metalled roads and a bazar known as the Robertson Bazar. A large vegetable market in addition has recently been constructed by the Municipality. On the edge of the new town facing the railway Mesors. Balli Brothers' large factory is situated.

About half a mile to the unrih of Mirpur Khaa is a great heap of mins known as Kahnjo daro. Up to the time of the construction of the railway they were thought to be valueless, and the contractors for the line dug up bricks from which to make contract. In the course of these excavations some ortannental bricks and two remarkable figures were uncarthed, which were pronounced by Sir James Campbell to represent Sikhi, the second

Buddhs, and to belong to the first half of the sixth century A.D. The matter was not however acromaly investigated until 1909 when the Superintendent of the Archeological Survey, Mr. H. Consens, visited the spot. His description of it is his annual progress report is as follows:

On my return from Brahmannbad I halted a couple of days here. The mounds lie about half a mile to the north of the town, are compact, and not very extensive. They cover roughly about ten acres. Towards the north end of the site is the runed atomp in sundiried bricks of an old stups, which must have had a descrated cuter casing of beautifully carved brickwork. Mach of this still lies about and I gathered about a cartload, some of the best of which I brought away, leaving the rest in the charge of the Executive Engineer. Most of the brickwork was carried off for use on the railway when under construction.

Forming a circle surrounding the stupe are large mounds which appear to be the sites of momentic establishments, while to the south are others meanmented with this group. The whole place has been a quarry for brick which has even been dug out of the very foundation of the walls.

The stump of the staps as it stands looks as if it had not been disturbed beyond the stripping of the outer brickwork. It is a great solid mass of analysis brick laid in mud.

Lying upon the ground was found a fragment forming nearly half of a dayof-r Tee of burnt clay in one piece with a large hole in the centre for the staff of the umbrella.

The site, although so desolate and devastated by the contractor and other randals, might still repay a digging and investigation. The whole seems to be the site of a large Buddhist monastic establishment grouped about the large stupa and is thus of altogether a different nature to the more extensive ruins of Brahmanabad."

In the following year Mr. Consens made a thorough excavation of the site and the results attained are best described in his own report:

"An soon as I could arrange for coolins I started digging at the stupa, As the mound was practically without shape or form save that the central core of sundried bricks rising shove the rest roughly indicated the middle of the staps, I drove trenches in towards the centre from the ground level on the outer margin of the slope on the south and east. This was to try and strike the edge of the pakks brick basement of the stups if auch existed within the mound. I had only just started this when I hall to obey a summons to visit Mamin in Central India. While away I left my men in charge of the digging. On my return I found that they had struck solid brickwork in both cuttings, and upon following the edge of this I found it to be a square foundation. It was not long before we located and unearthed the S.-E., S.-W. and N.-W. corners. But before finding these corners I had directed a cutting from a higher level upon the south side into the centre of the mound as nearly as I could guess it. On finding the corners of the foundation I was able to locate the centre with greater confidence,

Down through the centre a well about 10 feet in diameter was sunk while at the same time further opening up of the brick basement was bong made. This well was sunk in the hope of coming upon a relic chamber in the heart of the stups; but of this I was somewhat doubtful since it was recorded that Mr. J. Gibbs in 1859 exceeded the base of a brick thul at this place, and found a vase of fine earthenware containing some pieces of crystal and smothyst. But then again I considered that if this had been a relic casket be would have had something more to say about it, and so I settled down to find out for myself by going to the bottom of the mound.

I began also to clear the debris around this core of kacha brickwork in which I expected to find some of the fallen carved and decorated brickwork from the upper walls that had been destroyed and succeeded in uncerthing many fine fragments displaying an endless variety of designs in Greek frat, delicate scroll work, grotesque faces and figures, lotus leaf mouldings, figure medallions, chequer work, basket patterns, etc.

While at this work on the south side of the mound the diggers working near the surface rolled away a fine head of a Buddha and upon examining the spot I found it belonged to an image which was buried just below the level of the rough platform upon which they were working. Clearing the sarth and the brick debris from around this image it was seen that it occupied a niche in a runnel wall running east, and west and faring south. I then examined the edge of this platform upon the north side and soon found the tops of some of the plateters of the same wall on this side. I had thus found the edges of the remains of the walls of the great square basement upon which the round tower of the stupe stood, and men were set to work to follow this all around. Up to this moment I had little hope of finding anything very definite in the way of walls.

It was now found that the whole of this basement wall on all four sides had been carefully embedded in the burnt brick laid in mud for a distance of some ten to fifteen feet or more out from the walls. On laying bare the walls down to the original ground level, the reason for this was very apparent. It was found from the lines of the great mouldings, ranning round the basement that the walls had bulged out and had also sunk in the centres some 7 or 8 inches due no doubt to the immense dead weight of the superstructure and the very poor foundations provided. The danger of a collapse of the whole building must have been so imminent that this wholesale buttresung up was the only recourse left to prevent a disaster; and to this burying of the walls is due the good state of preservation in which we find what is left and particularly of the lineges of the Buddha in the panels. I at first thought it a device to hide the images from the eyes of early Muhammadan invaders, whose iconoclastic tendencies in those early days of Islam were very pronounced; but even a casual look at the basement is sufficient to show the real reason.

The most perfect of the four walls is that on the north side which I think rises to within about two and half or three feet of its original height. Each of the four walls is a little over lifty feet long and the north one rises as it stands in its partly ruined state to a height of 141 feet. It is

built of brick with a very fine smooth surface. The moulded basement in 6) feet high, and consists of mouldings. Above this the walls are divided longitudinally into five spaces by two corner and four intermediate pilasters with bases and capitals. The cornice monthings shove the capitals are gone and it is only one plaater that still has a portion of its capital remaining. The corner pilasters are square below and ortagonal (fluted) above. Each of the five bays has a large niche with ornamental drip stone above. In each of the three central niches is a seated Buildha. in the contemplative attitude with both hands in his lap, while in the outer panel at the east end a complicated trellis pattern boking like a trellised window. The corresponding one at the west end is missing. The east and south walls are similar in design to this. The Buddhas are in terra cotta and have been painted-fuir complexion red robes (rather a foxy red) and the hair, evebrows, and the pupils of eyes black. Over each image is a fine layer about 1-32 of an inch thick of what I had first thought was plaster but which I found to be rather a very thin coating of superior clay which had apparently been americal over the raw clay image and baked with it so as to give a fine surface for painting upon. This peels off in places but is quite red like the body of the image throughout its thickness. Buddha wears the robe over both shoulders and down to the feet. Most of these images have a circular mark on the fornhead between the sychrows represented by a small incised circle (the urna). The seat of the image in most cases is the double lotus seat, but the central image on the south and east aides is scated upon a four-logged actice.

The western tace of the basement differs from the other three and would appear to have been the principal or front side of the monument. Projecting from this face has been an addition which it is difficult to understand owing to its being in such a rained condition. At a point 15 feet from either end of this face the wall comes forward at right angles 2 feet where there is a small corner pilaster. From these pilasters the wall runs parallel on either side to the face of the basement 20 feet. The middle portion between these two points is much ruined but upon excavating the debris I found there were three small shrines set in the body of the basement—one in the centre facing west and one each on either side of it at right angles to it. In the debris and fallen brickwork here were found over a hundred unbaked clay votive tablets, one baked clay mould for making them, and thirty-six corroded sumular copper coins.

These small shrines no doubt held portable images of the Buddha which were probably carried away. But in the centre shrine was found a fine image 2' 6' in height of a prince or king with a curled wig and resting his left hand upon a sallet or money bag sing round his waist. It may be a portrait statue of the person who supplied the funds for the building of the stupa.

Whilst the work of the excuvation of the walls was going on the well in the centre of the mound was sinking steadily, until the evening of the 19th February when pakks burnt brick was struck in the middle of the floor of the well. Work was stopped until next morning.

The Commissioner in Sind, the Deputy Commissioner, Thar and Parker, and two other officials had arranged to come out and visit the mound on the morning of the 20th. They were thus fortunately present at the opening up of the brick chamber and the finding of the relic coffer and relies The cubical mass of burnt brickwork measured about 3' 0" each way and about 2 feet deep. Upon lifting a couple of layers of brick from the top a little square chamber or well was discovered within about 15 inches square and 12 inches depth, in the centre of which, and fitting it fairly, was a large roughly shaped atons. In each of the two corners beside it, the S. E. and S.-W., was a little red earthen pot with narrow month full of sand. The other two corners were empty. The chamber was set with its sides north and south and east and west. Upon the top of this stone which was the relic coffer was a quantity of grey sand such as in found a few feet below the surface here, in which were found coral and gold beads, very minute seed pearls and some grains of wheat. The upper stone was then carefully lifted when it was found to be the lid of a heavier stone lying beneath it. In each stone in the middle had been scooped out a conical hole about three inches in diameter, that in the lower stone being about three inches deep and that in the upper or lid little more than one inch. The faces of the two stones were not very smooth, so did not produce complete contact with each other all over.

In the middle of the hole in the lower stone packed round with grey sand was standing a little crystal phial, 23 inches high by about one incheside at its widest part. It is an aided and tapers slightly to the mouth, around which is a thick lip and over which was placed a silver cap much corroded. On the top of the cap had been placed a copper ring, perhaps a finger ring but very much enernated with verdigris which had fastoned it to the cap. In the sand around the phial and around the stone coffer were found more coral and gold heads, a very small gold ring, crystal beads, and ten copper coins. These coins are much corroded, but it is hoped they may be cleaned sufficiently to reveal their identity. They are about § inch square and about § inch thick. The coins already mentioned as having been found on the west face of the stupa basement are circular.

An examination of the crystal phial, the lower half of which was encased in silver much corroded, showed the bottom of it did not exist, it having been borken off. The silver casing was added to the bottomless bottle to form a new bottom. Within this phial was found a small cylindrical silver case, with lid at end like an ordinary tin case, about the size of it had an inch length of ordinary lead pencil, being rather more than a quarter of an inch in diameter. It had been wrapped round with gold leaf. As the lid was corroded on to the case it came to pieces in trying to remove it. Within this case was a smaller gold one, with at an inch long and with of an inch in diameter with a slide on lid as in the case of the silver one, but in parisect preservation, the gold retaining its pristing hence. This was opened and its contents turned out on to a clean sheet of paper. Its only contents was a small grain of some material about the size of a pin's head and a few specks of dust. This was disappointing and we began to fear we had drawn a blank until I tilted up the crystal phial

out of which came nearly an egg spensful of mountly brown powder with small lumps amongst it. The largest lump about a quarter of an inch square and a tenth of an inch think has the curve and texture of bone that has been charred, and an examination of the rest under a magnifying glass leaves little room for doubt but that the powder is human funeral ash and therefore the relin sought. There was far too much to go into the gold case and perhaps for that reason it was placed in the bottom of the phial under the silver case, the cases also being enclosed since they had been made for it and were hence sanctified to that use.

In the debris from the west face were found two term cotta medallions 8 inches in diameter bearing images of Kubera wearing a jewelled crown from under which flow down upon his shoulders long wig-like curls. He is stout with a big pauneb. In his right hand, resting upon his mised right knee, he holds a lotus, and in his left upon the left knee a depleted money tag.

The only stone about the stups was the relic coffer, everything else being in brick or term cotts.

In the Buddha panels in the walls he is in the contemplative attitude, while on the tablets we find him in the earth-touching and teaching attitudes. In the last he sits European fashion with his legs hanging down in front of the seat. Many of the tablets have nothing but attenuated dayober upon them of rather a Burmese pattern and on most, both with Buddah and the dayoba alone, is found the Buddhist formula in letters of about the 7th or 8th century. These tablets vary in size from about 6 inches to about 2 inches in the longest diameter.

The stups has been declared to be protected under the Ancient

Manuments Preservation Act.

Mithi (24° 44' North Latitude and 69° 51' East Longitude) the headquarters of the taluka of that name, had a
population of 3,679 at the census of 1911. The
bulk of the inhabitants are Hindna. It possessed a Minniequality, but
it was abolished in 1905. It now contains a Mukhriarkar's office, Police
station, Dispensary, Vernacular school, a Girla' school, a Post office and
Musafirkhana. Embroidery work is done at Mithi. The nearest rollway
station is Chhor 33 miles distant. There are the ruins of two forts belonging to the periods at the beginning of last century when the Talpura were
bringing That and Parkar under their dominion (see A Volume, page 138).
The principal one to the south of the village is the site of a Sarai. It
used to contain nine game. The other is to the west of the village on a
slight, elevation.

Nagar Parker in 21° 21' North Latitude and 70° 17° fast Longitude is the chief town in the talaks of the same name and had a population of 3,351 at the common of 1911. It is situated to the cast of a range of law hills. It contains a Mukhtiarkar's office, Police station, Post office, a Vernacular school for boys and another for girls, a District Bungalow and Dispensary. It is connected by roads with Islamkov, Mithi and other places in the Desert and with Bela in Cutch. A Municipality was established at Nagar in

1862, but was subsequently abolished. Cloth is woven and dyed here, and there is a local trade in wool, grain, etc. This town is believed to be of some antiquity, and the existence of several rained tanks in and about it wern to indicate a more prosperous condition in times gone by than is the case at present. About two miles to the south, in the Karunjhar rock, is a place of pilgrimage called Sardhars where there is a temple of Mahadev. A lair is held annually at this place on Shiva Ratra. Below the temple to the north is a pool of water at which the Hindus perform corresponds of the dead. Near the pool was a fort said to have been built by Chaudan son of Gobindrat. The fort was distroyed in 1859 by order of the British Government in connection with the rebellion mentioned at page 138 of the 'A' Volume. At a distance of a mile from Sardhara to the south is a stone statue of a circ against the rock out of the udders of which water flows into a tank. The tank is always full of water. Another place of pilgrimage is Anchli Sar, where there is a ling of Mahadev. There are three tanks here filled by springs.

Pithoro is a railway station on the Jodhpur-Bikanir Railway about a mile north of which there is a very conspicuous shrine of a departed saint from whom the place shrine of a departed saint from whom the place gets its name. From the legens's of Pir Pithoro and its nurseles it is difficult to extract anything historical, but the Pir has a very large following among Manghwars and the annual fair held at his tomb is one of the greatest in Sind. The attendance is estimated at between 20,000 and 30,000 and the sales of silver and braasware, alle and embroidery, saddles and harness, etc., are supposed to amount to two or three lakha of rupees. The fair begins on the first of Badho (about the beginning of September) and lasts for four days.

At a quarter of a mile to the north of the milway station stands the Pithore Madressalt, which has already been mentioned in the chapter on Education.

Samaro is the headquarters of Pithoro Taluka. It is a small village nineteen miles distant from Pithoro Railway sastion and contains a Mukhtiarkur's office, Pest office, Musahrkhana Dispensary and Public Works Department Inspection Burgalow. It is otherwise a place of no importance.

Sanghar (26° 3' Korth Latitude and 68° 50° East Longitude), the head-quarters of the taluka of that name, is a small town which had a appulation of 2,382 at the consus of 1911. It contains a Makhtharkar's office. Post office, two District Bungalows, very extensive Police lines, Dispensary, Vernacular whool and Musafirkana. It is 10 miles distant from Sinjhoro and 13 from Bobi on the Mirpur Khas Khadro Railway. Sanghar is a place of fittle importance. It is close to the Makhidihand and was in the centre of the country that saffered from the Har outhway. The Har leader flachs was publicly hangest at Sanghar in 1896.

Umarkot, situated in 25° 22° North Latitude and 69° 47' East Longitude,
was up till 1906 the headquarters town of the
Umarkot. It contains a Municipality and had a

population of 3,970 at the census of 1911. The bulk of the population consists of Hindus. The town lies on the edge of the desert and on the high road from Jodhpur to Hyderabad, i.e., from Rajputana into Sind, and till supplement by the railway was the most important town in Sind east of Hyderabad. Its importance is now dimmishing.

The most conspicuous feature of Umarkot is its fort, about 500 feet square with mild walls 40 feet high interspersed with towers at the four corners and along the walls. Standing inside the fort and close to the bungalow is a large round tower. The bungalow was at one time the Residency of the Political Superintendent and then the Deputy Commissioner. It has now been converted into a circuit house. The Government offices were all formerly contained within the fort, but recently new police lines have been system outside. There is nothing class of interest in the town. It has the usual buildings such as a Post and Telegraph office, Dispensity, school and musafirkhana. It is surrounded on the western and southern sides with extensive gardons, in which

peacocks appear to thrive.

Umarket is a very old town. The name means the fort of Umar or of the Sumras and tradition ascribes its founding to Umar the first king of the Sumras. Standing on the edge of the desert just where the principal read from Hindustan entered Sind proper, the possession of it was very important to the rulers of the latter country. It was wrosted from the Samma about the year 1226 A.D., according to tradition, by a Rapput adventurer named Parmar Sodha. His successors held it for centuries and from it ruled all the Thar. It was one of them (see A Volume, page 103) who placed the fort at the disposal of the fugitive Emperor Humayan and gained for it the distinction of being the barthplace of the Emperor Akhar. When Nur Muhammad Kalhora extended his power to the east of the Imine, he got possession somehow of Umarkot, but the last of the Kalhoras sold it to the Chief of Jodhpur from whom the Talpura recovered it in 1813. They ampally kept a garrison of 400 men in it. It remained in their possession mail the conquest.

The connection of Akbar with Umarkot is commemorated by a stone slab, which now stands on the outskirts of the town, and bears an inscription of unknown authorship to the effect that King Mahammad Akbar was born here in the Hirji year 943. There is a mistake of six years in the date.

Virawah. Nagar Parkar, and is interesting only on account of the number of Jain ruins contained in the remains of the old town of Pari Nagar adjacent. There are different traditions about Pari Nagar which is said to have been founded in the lifth or sixth centary and to have been destroyed in the twelfth. It was a very populous and flourishing town. It is now a brick heap and only one small Jain temple remains standing. It was here that Mr. Giles, when Deputy Commissioner of the district, obtained the magnificently carved block of marble which is now in the Karachi Museum.

There are hundreds of mins in the desert, besides those mentioned above, which have no claim to separate notice.

Form, Tembs, str. The forts built by the Mirs at Michi have been mentioned. There are similar ones at Islamket and other places in Chhachhro and Mithi talukas. At Nawaket there is a fort built by Mir Ali Murad for his own residence when he quarrelled with his relations.

The coast of the Rann is almost a continuous chain of mined towns, Some were destroyed in the hostilities between Sind and Cutch which were intermittent and became scute under Chullam Shah Kalhora; and some undoubtedly were destroyed by the carthquake of 1819. Places like Rahinki Bazar are surviving vestiges. The number of shrinas, tubus, and rums! mesques is also considerable.
